

Chapter 15:

1. Oscillation slide
2. Example 15.1 - 15.4
3. Energy of the Simple Harmonic Oscillator
 - a. $E = 1/2kA^2$ proof
4. Pendulum
 - a. $T = 2\pi/\omega = 2\pi\sqrt{\frac{L}{g}}$ proof (Period of a simple pendulum)
 - b. Math using period of a simple pendulum

Chapter 16:

1. Wave motion slide

Chapter 17:

1. Doppler effect
2. Decibel scale (why we use decibel scale using logarithmic format, how intensity of sound changes when changing decibel value, how we should change decibel value if we want to change intensity by a specific margin)

Chapter 18:

1. Superposition
2. Interference
3. Resonance frequency
4. Beats
5. Superposition principle of wave

Chapter 19, 20, 21, 22

Class lecture, Slides, CT
