

Architecture subject

ch-1 to 5 Review que
extra question que: Draw and Briefly
Design, discuss top
level structure
Architecture

Chapter 2

Review - 6 marks que
extra que: 1) What is ARM processor

2) Discuss the usage of
ARM processor → 3 marks

3) What is embedded system

4) Discuss the various
places where embedded system

5) Write short note about
all micro processor → 10 marks

6) Which type technique to improve the speed of micro processor.

7) Discuss: the different generation of computer.

8) Describe the von Newman machine. [3m]

9) Discuss the IAS computer. Different type of register use in IAS computer.

10) Discuss the memory format of IAS computer with design.

Ch-3

1) Discuss the basic components of EDVAC computer.

2) Short note of Different types of computer {mainframe, etc.

3) performance { latency, throughput, etc.

Q5) IC long-run for CPI in etc

4) ~~to~~ ~~the~~ ~~sorter~~ computer level design, not
 we ~~a~~ ~~new~~ ~~control~~ ~~level~~ ~~design~~ ~~so~~ ~~also~~ -
 primary not ~~can~~ }

5) - market place ଉତ୍ପାଦନ hardware, software
Design ନିର୍ଦ୍ଦେଶ ମାନ କମ୍ପ୍ୟୁଟର ସଫ୍ଟୱେର ଡିଜାଇନ୍ ଟ୍ରେଣ୍ଡସ ଉପ

1) Discuss the different types of CPU component.

2) Math must.

1. CPU 2. Performance 3. Instruction set 4. Control

a) Discuss the instruction cycle of the instruction and CPU.

5) Draw the CPU organization. (Page: 27)
which is represented and connected
with the memory.

Ch-5

- 1) Difference between RISC & CISC.
- 2) How many Addressing mode (Discuss R-R, R-M, M-M) (Advantage & Disadvantage)
- 3) Content for stack (solved)

Ch-6

1) Addressing Mode.

- 1) Draw a memory model access to byte and Half word (Image) discuss
- 2) Compare 20 Addressing mode explain

Ch-7

- 1) Draw a general view of finite state machine with combinational logic and hardware (Fig-5.7)
 - 2) Discuss Load, Store, Instruction
 - 3) Performance on hardware control
- Example: 5.2, 5.3
- 4) Discuss How can evaluate branch condition. (Explain the 3 point)

Ch-8

- 1) Write down the situation where the computer interrupts are used.
 - 2) Computer instruction classification
 - 3) Which type of condition are taken when
 - 4) interrupt ^{"occur"} on track or 2 way.
 - 5) MIPS 9 or 80486 register overflow
- for IV,

50

Ch-9

- 1) ~~Para~~ Explain the principle of locality of hierarchy. ^{every level} discuss.
 - 2) Memory hierarchy $\rightarrow$ What is ? Discuss.
 - 3) Math.
 - 4) hit, miss, miss rate, hit rate $\rightarrow$ define with math.
 - 5) Discuss the block size's relationship miss penalty, miss rate with picture
- L. 7.2 - Fig

Ch-10

check-memory placing technique
Write down the block placing use
in each.
