Family

What is Family?

- **Critical Social Institution:** The family plays a vital role in society.
- **Distinct Social Group:** It has its own unique roles, patterns, and behaviors.

A family is a social unit of people related by marriage, birth, or adoption who live together. They engage in economic cooperation, socially approved sexual relations, and the raising of children.

Family in Different Societies

- **Hunter Societies:** Maintained small families due to constant movement and the difficulty of feeding many people.
- **Agricultural Societies:** Families became larger to provide more help on farms.
- **Industrialization:** Led to smaller families once again.

Types of Family

On the basis of size and structure or according to the number of members family may be classified into two types such as,

- (i) Nuclear family
- (ii) Joint family or extended family

Nuclear Family:

- ✓ A nuclear family includes a husband, wife, and their unmarried children.
- ✓ **Size:** It is a small family unit.
- ✓ **Independence:** It operates independently from extended family members

Extended or joint family

- ✓ Extended or joint family is large in size.
- ✓ It consist of a number of nuclear family.
- ✓ It includes members of three to four generations.
- ✓ It is an extension of parent child relationship.
- ✓ This family is based on close blood ties.
- ✓ The eldest male member is the head of the family.
- ✓ Extended family consists of father, mother, their sons and their wife, unmarried daughters, grand children, grand father, grandmother, uncles, aunts, their children and so on.
- ✓ This type of family found to exist in rural community or agrarian economy

Current industrial society and family

- **Romantic Love:** Marriages are based on strong love and close relationships, not on economic reasons.
- **Choosing a Spouse:** Young people prefer to choose their own partners and have intimate relationships with them, free from family dictates.
- **Unique to Industrial Society:** This way of family life is a result of industrial society.
- **Nuclear Family Dominance:** The nuclear family is the most common form of family life in industrial societies.
- **Greater Freedom:** The shift to nuclear families is partly due to a desire for more freedom from the older generation's control.

Rise of the modern family

The rise of the modern family involved the rise of two basic characteristics:

Ties of Affection

- **Choosing Partners:** Young people began rejecting parental interference in choosing whom to marry.
- **Marriage for Love:** Marriage started being seen more as a loving partnership rather than an economic arrangement.
- **Children's Welfare:** There was a growing concern for the well-being of children.

Desire for Private Family Life

19th Century Shift: By the mid-19th century, families emphasized their private existence and separation from the outside world.

Nuclear families have a functional fit with industrial society

Nuclear families allow for:

- **Geographical mobility**

- ✓ Families can move to where the work is

- **Social mobility or meritocracy**

- ✓ In extended families, social mobility can lead to inter-generational conflict, but this is less of a concern when families are “privatized” as small independent units.

- **Specialized roles.**

- ✓ In nuclear families, in industrial societies, men and women have separate specialized roles.

Marriage and issues!

Marriage

- **Union of People:** Marriage is when two or more people come together in a stable, lasting relationship, often with a romantic connection.
- **Universal:** It's found in every society around the world in some way.
- **Social Roles:** In marriage, there are expectations about what each person should do.
- **Cultural Idea:** What marriage means and who can marry is decided by each culture's beliefs and customs.

Types of marriage in sociology

Arranged Marriage

- **Family Arrangement:** Arranged marriages are typically organized by the families of two individuals.
- **Practical Benefits:** They offer economic and practical advantages to both parties and their families.
- **Not Based on Love:** Arranged marriages are not centered around romantic love. But it turns into love after marriage.

Civil Partnership Instead of Marriage

- **Legal Relationship:** A civil partnership is a registered legal relationship between a couple.
- **Similar Rights:** It provides many of the same rights as marriage, excluding certain titles and child adoption rights.

Industrial Society and Urbanization

Industrial Society and Urbanization Development

Industrialization Process

- **Economic Transformation:** Industrialization changes an agricultural economy into a manufacturing-based one.
- **Mass Production:** Manual and specialized labor are replaced by mass production and assembly lines.

Urbanization Impact

- **Economic Growth:** Industrialization drives economic growth and job opportunities, attracting people to cities.
- **Starting Point:** Urbanization often begins with the establishment of factories, creating a need for factory labor.
- **Business Expansion:** Other businesses, like building manufacturers and retailers, follow the factories to meet worker demand.
- **Job Creation and Housing Demand:** This expansion creates more jobs and the need for housing, establishing urban areas.

Modern Era Shift

- **Technology Hubs:** Nowadays, manufacturing facilities like factories are often replaced by technology-industry hubs.
 - **Worker Attraction:** These hubs draw workers from other areas, contributing to urbanization much like factories did in the past.
-

“At a Glance”

- i. Industrialization:** Turns farming into manufacturing, while urbanization means cities grow.
- ii. Historical Shift:** Humans changed from hunting to farming, relying more on water.
- iii. From Farming to Business:** Industrialization moves us from small farms to big agriculture.
- iv. City Migration:** People move to cities as machines make more stuff.
- v. Ongoing Urban Growth:** Cities keep growing as economies and societies change.

Disaster

Disaster

A disaster is a major disruption that harms a community or society, causing significant material, economic, social, or environmental losses that the affected community cannot handle on its own.

Pre, During and Post Disaster Phase

Key Phases of Disaster Management

- **Pre-Disaster**

Activities to reduce potential losses and minimize impact when a disaster occurs.

- **During Disaster**

Actions to meet the needs of victims and reduce their suffering.

- **Post-Disaster**

Efforts to achieve quick and lasting recovery without repeating previous vulnerabilities.

Common Hazards/Disasters in Bangladesh

1. Floods
2. Cyclones
3. Riverbank Erosion
4. Droughts
5. Tornadoes
6. Landslides
7. Earthquakes
8. Salinity Intrusion
9. Storm Surges
10. Flash Floods
11. Waterlogging
12. Heatwaves
13. Cold Waves
14. Tidal Surges
15. Fire Hazards

Risk Profile of Bangladesh

DROUGHT

FLASH FLOOD –

Unpredictable, recurring, uncertain.

FLOOD - Inundates more areas, increases river erosion, breaches embankments, damage infrastructures.

SALINITY INTRUSION

CYCLONE - Remain to be the deadliest and most destructive hazard. It is recurring, with lingering aftermath, complex recovery.

AND CLIMATE CHANGE HAZARDS, EARTHQUAKES, FIRE BREAKOUT, INFRASTRUCTURE COLLAPSE ETC.

Issues in Disaster Management

1. Lack of Early Warning Systems
2. Inadequate Infrastructure
3. Limited Resources
4. Public Awareness
5. Rapid Unplanned Urbanization
6. Environmental Pollution
7. Data Deficiency
8. Healthcare Services
9. Political Instability
10. Cultural Barriers
11. Climate Change
12. Economic Problems
13. Post-Disaster Recovery

Thank You!
