

Sociology

1

- a) What do you understand by the term 'Government'? What is the difference between Absolute monarchy and Constitutional monarchy?
- b) In a feudal society, states is based on land ownership. What is the political importance of feudalism?
- c) What are the organs of the government? Differentiate among them.

Ans

a) Government and Monarchy Types

Government:

- The organization or group that makes and enforces laws for a country or area.
- Responsible for maintaining order, providing public services, and protecting citizens' rights.

Absolute Monarchy: পরম রাজতন্ত্ৰ

- A form of government where the king or queen has total control over the government and is not limited by laws or a constitution.
- Examples include historical monarchies like Louis XIV of France.

Constitutional Monarchy:

- A form of government where a king or queen acts as the head of state within the parameters of a constitution.
- The real political power is held by elected officials, such as a parliament.
- Examples include the United Kingdom and Japan.

b) Political Importance of Feudalism সামন্তবাদ

- **Feudalism:** A social and economic system where land is owned by lords and worked by peasants.
- **Political Importance:**
 - Created a structured society with clear hierarchies.
 - Lords provided protection and land to vassals in exchange for military service and loyalty.

- It decentralized power, with local lords having significant control over their own territories.
- Helped maintain order and stability in times when central authority was weak or absent.
- Established relationships and obligations that structured medieval political and social life.

c) Organs of Government

1. Legislative:

- Makes the laws.
- Example: Parliament or Congress.
- Composed of elected representatives who debate and pass legislation.

2. Executive:

- Enforces the laws.
- Example: President or Prime Minister and their administrations.
- Includes various government departments and agencies responsible for day-to-day administration.

3. Judicial:

- Interprets the laws.
- Example: Courts and judges.
- Ensures that laws are applied fairly and resolves disputes.

Differences:

- **Legislative:** Creates laws and policies, represents the will of the people, and checks the power of the executive.
- **Executive:** Implements and administers laws and policies, manages national affairs, and conducts foreign policy.
- **Judicial:** Reviews and interprets laws, ensuring they are applied fairly and consistently, and protects individual rights against unlawful actions.

2

a) Define the following terms:

i) Budget

ii) Hearing

iii) Lobby

iv) Amendment

b) What do you understand by the term 'Modern State'? What are the functions of the modern state?

c) What are the contemporary aspects of public administration regarding the following topics:

i) Protecting and advancing democracy

ii) Ensuring Environmental-Sustainability'

Ans

a) Definitions

i) Budget:

- A plan for how a government or organization will spend its money.
- Lists expected income and expenses over a specific period.

ii) Hearing:

- A meeting or session where people give information or opinions on a topic.
- Often used in courts or legislative bodies to gather evidence or viewpoints.

iii) Lobby:

- A group of people trying to influence lawmakers to pass or change laws.
- They work on behalf of specific interests, like businesses or social causes.

iv) Amendment:

- An amendment is a change or addition to a constitution or a bill. It can add, remove, or change parts of the document before it becomes final.
- Used to update or improve the original document.

b) Modern State

Modern State:

- A country with a well-organized government that can enforce laws, protect citizens, and provide services.
- Has defined borders and recognized sovereignty.

Functions of the Modern State:

- **Law Enforcement:** Keeping order and protecting citizens.
- **Public Services:** Providing education, healthcare, infrastructure, etc.
- **Economic Management:** Regulating the economy and managing resources.
- **Defense:** Protecting the country from external threats.
- **Foreign Relations:** Managing relationships with other countries.

c) Contemporary Aspects of Public Administration

সমসাময়িক দিক

i) Protecting and Advancing Democracy:

- Ensuring free and fair elections.
- Promoting transparency and accountability in government.
- Protecting individual rights and freedoms.
- Encouraging citizen participation in political processes.

ii) Ensuring Environmental Sustainability:

- Implementing policies to protect natural resources.
- Promoting renewable energy and reducing pollution.
- Encouraging sustainable practices in businesses and communities.
- Addressing climate change through regulations and initiatives.

3.

a) What do you mean by social dynamics? t

b) Juvenile gangs are the result of social unrest. Give your opinion.

c) What are the impacts of technological factors in real life disaster management risk reduction?

Ans

a) **Social Dynamics** সামাজিক গতিবিদ্যা

Social Dynamics:

- The study of how individuals and groups interact and change over time within a society.
- Includes how social behaviors, norms, and relationships evolve.
- Examples include changes in family structures, cultural trends, and social movements.

b) Juvenile Gangs and Social Unrest

Opinion:

- **Agree:** Juvenile gangs often form in response to social unrest and instability.
 - Lack of opportunities, poverty, and broken family structures can push young people towards gangs.
 - Gangs provide a sense of belonging and protection in troubled communities.
- **Disagree:** Not all juvenile gangs are solely due to social unrest.
 - Peer pressure, desire for status, and thrill-seeking can also lead to gang involvement.
 - Some communities with social unrest do not have significant gang problems due to strong community programs and support systems.

c) Impacts of Technological Factors in Real-Life Disaster Management Risk Reduction

- **Early Warning Systems:** Technology enables the development of early warning systems for disasters like hurricanes, earthquakes, and tsunamis, allowing for timely evacuations and preparations.
- **Communication:** Advanced communication tools ensure quick dissemination of information to the public and between emergency responders.
- **Data Collection and Analysis:** Technologies like drones, satellites, and big data analytics help in assessing damage, predicting disaster patterns, and planning efficient responses.
- **Resource Management:** Technologies improve the allocation and tracking of resources like food, water, and medical supplies during disaster relief efforts.
- **Training and Simulation:** Virtual reality and simulation software provide realistic training scenarios for disaster response teams, improving preparedness and coordination.
- **Resilient Infrastructure:** Technological advancements in construction materials and techniques can create buildings and infrastructure that are more resistant to natural disasters.

4

a) What do you understand by the term 'Sociology'? What are the significant features of sociology?

b) What is 'Social Structure'? To understand the social structure, we have to understand different components. What are those components of social structure?

c) Define following terms:

i. Globalization

ii. Bureaucracy

iii. Caste

iv. Human Ecology

Ans

a) Sociology

Sociology:

- The study of society, social behaviors, and interactions among individuals and groups.
- It seeks to understand how societies are organized, how social institutions operate, and how social change occurs.

Significant Features of Sociology:

- **Scientific Study:** Uses systematic methods of investigation and theoretical thinking.
- **Social Institutions:** Examines institutions like family, education, religion, and economy.
- **Social Relationships:** Focuses on how relationships and social networks shape behavior.
- **Social Change:** Studies how societies evolve over time.
- **Cultural Understanding:** Explores how culture influences social life.

b) Social Structure

Social Structure:

- The organized pattern of social relationships and social institutions that together compose society.

Components of Social Structure:

1. **Statuses:** Positions people hold in society, such as student, teacher, or parent.
2. **Roles:** Expectations and behaviors associated with a particular status.
3. **Social Institutions:** Organized systems of social relationships, such as family, education, and government.
4. **Groups:** Collections of individuals who interact and share common goals, such as clubs or workplaces.
5. **Networks:** Sets of relationships among individuals or groups.
6. **Norms:** Rules and expectations for behavior within a society.
7. **Values:** Shared beliefs about what is good or bad, right or wrong.

c) Definitions

i) Globalization:

- The process of increasing interconnectedness and interdependence of the world's markets and businesses.
- It involves the exchange of goods, services, information, and culture across international borders.

ii) Bureaucracy:

- A system of administration characterized by strict procedures, a clear hierarchy, and detailed rules and regulations.
- Often associated with government agencies and large organizations to ensure efficient and consistent operations.

iii) Caste:

- A social stratification system where people are born into a particular social group with specific roles and privileges.
- Commonly associated with traditional Indian society, where caste dictates social status and occupation.

iv) **Human Ecology:**

- The study of the relationships between humans and their natural, social, and built environments.
- Focuses on how human behavior affects and is affected by these environments, and seeks to understand sustainable ways of living.

5)

a) **Differentiate between:**

i) **Quantitative data and Qualitative data**

ii) **Open-ended questions and close-ended questions.**

b) **What do you understand by the term 'Research'? To do any kind of social research, you have to identify a study area. What kinds of issues do you have to consider before selecting an area as your study area for research.**

c) **What are the implications of the following research methods:**

i) **Ethnography**

ii) **Participant observation**

d) **What is the meaning of 'Community' to you?**

Ans

a) Differences

i) **Quantitative Data vs. Qualitative Data:**

- **Quantitative Data:**
 - Data that can be measured and expressed numerically.
 - Examples: survey results, statistical figures, measurements.
 - Used to identify patterns, test theories, and make predictions.
- **Qualitative Data:**
 - Data that is descriptive and non-numerical.
 - Examples: interviews, observations, textual analysis.
 - Used to understand concepts, experiences, and social contexts.

ii) Open-Ended Questions vs. Close-Ended Questions:

- **Open-Ended Questions:**
 - Questions that allow respondents to answer in their own words.
 - Examples: "What do you think about the new policy?" or "How do you feel about your neighborhood?"
 - Useful for gathering detailed and in-depth information.
- **Close-Ended Questions:**
 - Questions that provide specific options for responses.
 - Examples: "Do you like the new policy? (Yes/No)" or "Rate your satisfaction from 1 to 5."
 - Useful for collecting quantifiable data and making comparisons.

b) Research and Study Area Selection

Research:

- A systematic investigation to establish facts, principles, or knowledge.
- Involves collecting data, analyzing information, and drawing conclusions.

Considerations for Selecting a Study Area:

- **Relevance:** The topic should be significant and relevant to current issues or gaps in knowledge.
- **Feasibility:** Consider the availability of resources, time, and access to data or subjects.
- **Ethical Issues:** Ensure the study respects the rights and well-being of participants.
- **Interest:** Choose a topic that interests you to maintain motivation throughout the research process.
- **Scope:** Make sure the area is neither too broad nor too narrow, allowing for manageable and thorough investigation.

c) Implications of Research Methods

i) Ethnography:

- A qualitative research method where the researcher immerses themselves in a community or group to observe and interact with participants.
- **Implications:**
 - Provides deep insights into cultural practices and social interactions.

- Requires significant time and commitment.
- Can be subjective due to the researcher's involvement and perspective.

ii) Participant Observation:

- A method where the researcher becomes a part of the group being studied while observing their behaviors and interactions.
- **Implications:**
 - Offers a unique insider perspective on the group's dynamics.
 - Helps understand the context and meaning of social actions.
 - The researcher's presence might influence participants' behavior.

d) Meaning of 'Community'

Community:

- A group of people who share common interests, values, or geographic location.
- Provides a sense of belonging, support, and identity to its members.
- Examples: neighborhoods, online groups, cultural or religious groups.

6.

a) Culture is the systems of knowledge shared by a relatively large group of people. But sometimes, cultural lag happens. What do you understand by the term 'cultural lag'?

b) What does a society become complex? State this aspect mentioning the components of a complex society.

c) What is capitalism? What do you know about the growth of capitalism between the time 1600 and 1700s?

d) Differentiate between material and nonmaterial culture?

Ans

a) Cultural Lag

Cultural Lag:

- The period of time during which the non-material culture is struggling to adapt to new material conditions.
- Occurs when technological advancements and changes in material culture outpace the changes in norms, values, beliefs, and laws.
- Example: The invention of the internet (material culture) and the slower adaptation of laws and social norms related to its use (non-material culture).

b) Complex Society

Complex Society:

- A society with a large population, diverse social structures, and advanced economic and political systems.

Components of a Complex Society:

- **Social Stratification:** Different levels of social classes, often based on wealth, occupation, or education.
- **Division of Labor:** Specialized roles and professions that increase efficiency and productivity.
- **Formal Institutions:** Organized structures like governments, legal systems, and educational institutions.
- **Advanced Technology:** Tools and systems that support large-scale agriculture, industry, and communication.
- **Urbanization:** Growth of cities as centers of culture, politics, and economy.

c) Capitalism and its Growth (1600-1700s)

Capitalism:

- An economic system where private individuals or businesses own capital goods.
- Production, distribution, and prices are determined by competition in a free market.

Growth of Capitalism (1600-1700s):

- **Trade Expansion:** Increased global trade, especially with the Americas, Asia, and Africa, leading to wealth accumulation.
- **Colonialism:** European countries established colonies, exploiting resources and labor, which fueled economic growth.
- **Mercantilism:** Economic policy that promoted government regulation of a nation's economy to augment state power at the expense of rival national powers.
- **Industrial Advances:** Early technological innovations in agriculture and manufacturing boosted productivity and trade.
- **Financial Institutions:** Development of banks, stock exchanges, and joint-stock companies facilitated investment and economic growth.

d) Material vs. Nonmaterial Culture

Material Culture:

- Physical objects, resources, and spaces that people use to define their culture.
- Examples: Buildings, tools, clothing, art, and technology.
- Tangible and concrete aspects of culture.

Nonmaterial Culture:

- Intangible elements of culture, including beliefs, practices, aesthetics, and values.
- Examples: Language, religion, traditions, laws, and customs.
- Abstract and symbolic aspects of culture.

7.

a) “Nuclear families have a functional fit with industrial society”- Justify the statement.

b) What are the relationships between industrial society and the development of urbanization?

c) Sketch the following framework:

i) Disaster Management institutional framework

ii) Disaster Management Regulatory framework

d) What are the difference between the nuclear family and the extended family?

Ans

a) Nuclear Families and Industrial Society

“Nuclear families have a functional fit with industrial society” -

Justification:

- **Mobility:** Nuclear families (parents and their children) are more mobile, which suits the need for workers to move to different locations for industrial jobs.
- **Economic Efficiency:** Smaller family units are more economically efficient in terms of housing and resource management, fitting the industrial model of productivity.
- **Socialization:** Nuclear families can more easily adapt to the social and educational needs required for industrial jobs, focusing on skills and education.
- **Independence:** Industrial society values individualism and independence, which are more easily fostered in nuclear family structures compared to extended families that may have more traditional, collective dynamics.

b) Industrial Society and Urbanization

Relationships between Industrial Society and Urbanization:

- **Economic Opportunities:** Industrialization creates jobs, attracting people to cities where factories and industries are located.
- **Infrastructure Development:** Cities develop better infrastructure (transportation, housing, services) to support industrial activities and the growing population.
- **Social Services:** Urban areas provide better access to education, healthcare, and other social services that support an industrial workforce.
- **Population Density:** Increased population density in urban areas supports the growth of markets and services, further driving economic growth.
- **Innovation:** Concentration of people in urban areas fosters innovation and the exchange of ideas, essential for industrial growth and development.

c) Frameworks

i) Disaster Management Institutional Framework:

- **National Disaster Management Authority (NDMA):** Central body responsible for planning, coordinating, and implementing disaster management activities.

- **State Disaster Management Authorities (SDMAs):** State-level bodies that align with NDMA guidelines to handle local disaster management.
- **District Disaster Management Authorities (DDMAs):** Local bodies responsible for implementing disaster management plans at the district level.
- **Community-Based Organizations (CBOs):** Local groups that assist in disaster preparedness, response, and recovery.
- **Non-Governmental Organizations (NGOs):** Provide additional support and resources for disaster management efforts.

ii) Disaster Management Regulatory Framework:

- **Disaster Management Act:** Legislation that outlines the legal framework for disaster management activities and responsibilities.
- **National Disaster Management Plan (NDMP):** A comprehensive plan that details strategies, policies, and actions for disaster management.
- **Building Codes and Regulations:** Standards for construction that ensure buildings are resilient to disasters like earthquakes and floods.
- **Environmental Regulations:** Policies that mitigate the impact of environmental disasters by protecting natural resources.
- **Emergency Response Protocols:** Established procedures for immediate action during disasters, including communication, evacuation, and resource deployment.

d) Differences between Nuclear Family and Extended Family

Nuclear Family:

- **Composition:** Consists of two parents and their children.
- **Size:** Typically smaller, usually around 3-5 members.
- **Independence:** More independent and self-sufficient.
- **Mobility:** Easier to relocate for jobs or other reasons.
- **Decision-Making:** Decisions are usually made by the parents.

Extended Family:

- **Composition:** Includes additional relatives beyond the nuclear family, such as grandparents, aunts, uncles, and cousins.
- **Size:** Larger, can include many members living together or in close proximity.
- **Collective Support:** Offers more social and economic support within the family network.
- **Stability:** Provides more stability in terms of caregiving and shared responsibilities.

- **Decision-Making:** Decisions may involve input from multiple family members, including elders.

8.

a) The population is the whole number of inhabitants occupying an area and

continually being modified by increases and losses. What are the factors which affect population change?

b) What are pull and push factors of migration.

c) What is the future of technology in disaster management?

d) What types of technologies in disaster risk reduction can be used to ensure more effective and creative disaster management?

Ans

a) Factors Affecting Population Change

Factors Affecting Population Change:

1. Birth Rate:

- The number of live births per 1,000 people in a year.
- High birth rates increase the population.

2. Death Rate:

- The number of deaths per 1,000 people in a year.
- High death rates decrease the population.

3. Migration:

- Movement of people from one area to another.
- Immigration (moving in) increases the population, while emigration (moving out) decreases it.

4. Fertility Rate:

- The average number of children a woman is expected to have during her lifetime.

- Higher fertility rates lead to population growth.
- 5. **Life Expectancy:**
 - The average number of years a person is expected to live.
 - Higher life expectancy can increase the population by reducing the death rate.
- 6. **Economic Factors:**
 - Economic prosperity can lead to higher birth rates and lower death rates due to better healthcare.
- 7. **Social Factors:**
 - Cultural norms and societal values can influence birth and death rates.
- 8. **Political Factors:**
 - Government policies on family planning, healthcare, and immigration can impact population change.

b) Pull and Push Factors of Migration

Push Factors:

- Conditions that drive people to leave their homes.
 - **Economic Hardship:** Lack of jobs or poor economic conditions.
 - **Political Instability:** War, persecution, or lack of political freedom.
 - **Natural Disasters:** Earthquakes, floods, or droughts.
 - **Poor Living Conditions:** Lack of basic services like education, healthcare, and housing.

Pull Factors:

- Conditions that attract people to a new area.
 - **Job Opportunities:** Availability of employment and better wages.
 - **Political Stability:** Peace, safety, and political freedom.
 - **Better Living Conditions:** Access to healthcare, education, and higher standards of living.
 - **Family Reunification:** Moving to join family members who have already migrated.

c) Future of Technology in Disaster Management

Future of Technology in Disaster Management:

- **Advanced Early Warning Systems:** Using AI and machine learning to predict and warn about disasters more accurately and quickly.

- **Real-Time Data and Analytics:** Enhanced use of big data to monitor and respond to disasters in real-time.
- **Drones and Robotics:** Improved search and rescue operations, and delivering supplies in hard-to-reach areas.
- **Satellite Technology:** Enhanced mapping and monitoring of disaster-prone areas.
- **Communication Technology:** More resilient and flexible communication networks to ensure connectivity during disasters.
- **Blockchain Technology:** Securing data and transactions during relief efforts to prevent fraud and ensure transparency.

d) Technologies in Disaster Risk Reduction

Technologies in Disaster Risk Reduction:

- 1. Early Warning Systems:**
 - **Seismic Sensors:** Detecting earthquakes and providing early warnings.
 - **Weather Forecasting Tools:** Predicting hurricanes, floods, and storms.
- 2. Geographic Information Systems (GIS):**
 - Mapping and analyzing disaster-prone areas.
 - Helping in planning evacuation routes and resource allocation.
- 3. Drones:**
 - Aerial surveillance to assess damage and locate victims.
 - Delivering supplies to inaccessible areas.
- 4. Mobile Applications:**
 - Apps for emergency alerts, reporting incidents, and coordinating relief efforts.
 - Providing real-time information to the public and responders.
- 5. Internet of Things (IoT):**
 - Sensors and devices to monitor environmental conditions and infrastructure.
 - Collecting data to predict and mitigate potential disasters.
- 6. Artificial Intelligence (AI):**
 - Analyzing data to predict disaster patterns and impacts.
 - Automating response strategies and resource management.
- 7. Social Media:**
 - Platforms for disseminating information and coordinating community responses.
 - Crowdsourcing information from affected individuals.
