Introduction

Traditionally, schools focus a lot on the technical skills of core subjects, like math or science. However, they don't spend as much time teaching about human behavior in organizations. This is surprising because people are the heart of any organization.

Since organizations depend on their people to succeed, it's important to understand how we behave at work. This includes how we make decisions, communicate, and interact with each other. By learning about these aspects, we can create better workplaces and improve overall effectiveness. Understanding human behavior is just as crucial as mastering technical skills!
