

Chapter 1: Introduction(9th Edition)

1. What is an Operating System? 1.4 and 1.8
2. Computer System Structure (Hardware, Application Program, OS , User) 1.5
3. Draw the Four Components of a Computer System 1.6
4. What is the purpose of Operating Systems? 1.7
5. What is bootstrap program? The purpose of it. 1.10
6. Computer System Organization (CPU, Memory and I/O) 1.11
7. What is interrupt? 1.12
8. Common Functions of Interrupts (trap or exception). 1.13
9. Interrupt Handling (Polling and Vectored) 1.14
10. Interrupt Timeline 1.15
11. I/O Structure 1.16
12. Storage Hierarchy (Figure) 1.18/19/20
13. Caching 1.21
14. Direct Memory Access Structure 1.22
15. How a Modern Computer Works 1.23
16. Computer-System Architecture 1.24/25/26/27
17. Operating System Structure 1.29
18. Operating-System Operations 1.31/32
19. Transition from User to Kernel Mode 1.33
20. Process Management and Process Management Activities 1.34-1.35
21. Storage Management 1.37
22. Performance of Various Levels of Storage chart 1.39
23. Definition of Protection and Security 1.42
24. Computing Environments – Distributed 1.48
25. Computing Environments – Client-Server 1.49
26. Computing Environments - Peer-to-Peer 1.50
27. Computing Environments – Virtualization 1.51/52
28. Computing Environments – Cloud Computing 1.54/55

Chapter 2: Operating-System Structures(9th Edition)

29. Operating System Services 2.4/5/6
30. A View of Operating System Services figure 2.7
31. User Operating System Interface – CLI 2.8
32. User Operating System Interface – GUI 2.10
33. System Calls. 2.13....
34. Types of System Calls 2.20-2.23
35. Examples of Windows and Unix System Calls 2.24
36. MS-DOS 2.26

- 37. FreeBSD 2.27
- 38. System Programs 2.29-2.30
- 39. Non Simple Structure -- UNIX 2.37
- 40. Traditional UNIX System Structure 2.38

Chapter 3: Processes(9th Edition)

- 41. Process Concept 3.3-3.5
- 42. Process in Memory figure 3.6
- 43. Process State and Diagram of Process State 3.7-3.8
- 44. Process Control Block (PCB) 3.9
- 45. CPU Switch From Process to Process 3.10
- 46. Threads 3.11
- 47. Process Scheduling 3.13
- 48. Representation of Process Scheduling 3.15
- 49. Definition of Schedulers 3.16
- 50. Definition of Context Switch 3.19
- 51. Process Creation 3.21
- 52. Process Termination 3.27
- 53. Communications Models 3.30
- 54. Producer-Consumer Problem 3.32
- 55. Definition of Sockets 3.54
- 56. Socket Communication 3.55
- 57. Remote Procedure Calls 3.57-3.58

Chapter 4: Threads & Concurrency(Edition 9th)

- 58. Benefits 4.6
- 59. Single and Multithreaded Processes figure 4.10
- 60. Amdahl's Law 4.11
- 61. User Threads and Kernel Threads 4.12
- 62. Multithreading Models 4.13....
- 63. Pthreads 4.19...
- 64. Thread Cancellation 4.37-4.38

Chapter 5: Process Synchronization(9th Edition)

- 65. Definition of Process Synchronization
- 66. Race Condition 5.7
- 67. Critical Section Problem and its solution 5.8-5.10
- 68. Solution to Critical-Section Problem(Mutual Exclusion , Progress , Bounded Waiting)
5.11 (important)
- 69. Peterson's solution 5.13-5.15
- 70. Bounded-waiting Mutual Exclusion with test_and_set 5.22

- 71. Mutex locks [acquire(),release()] 5.23-5.24
- 72. Semaphore 5.25...
- 73. Deadlock and Starvation 5.30
- 74. Classical Problems of Synchronization 5.31
- 75. (Bounded-Buffer Problem ,Readers and Writers Problem , Dining-Philosophers Problem)5.32.....
- 76. Monitors 5.43...

Chapter 6: CPU Scheduling(9th Edition) (All)

Chapter 7: Deadlocks(9th Edition) (All)

Chapter 8: Main Memory(9th Edition)

- 77. Base and Limit Registers 8.5
- 78. Hardware Address Protection 8.6
- 79. Address Binding 8.7
- 80. Multistep Processing of a User Program 8.9
- 81. Logical vs. Physical Address Space 8.10
- 82. Memory-Management Unit (MMU) 8.11
- 83. Dynamic relocation using a relocation register 8.12
- 84. Dynamic Linking 8.13
- 85. Swapping 8.14
- 86. Contiguous Allocation 8.20
- 87. Multiple-partition allocation 8.23
- 88. Dynamic Storage-Allocation Problem 8.24
- 89. Fragmentation 8.25-8.26
- 90. Segmentation Architecture 8.30
- 91. Paging Hardware 8.35-8.38
- 92. Paging Hardware With TLB 8.43
- 93. Effective Access Time (important) 8.44
- 94. Memory Protection 8.45
- 95. Two-Level Paging Example 8.52

Chapter 9: Virtual Memory

No Suggestion Given from Teacher

PDF Made by FOYSAL EMON SHANTO-210122

Suggestion note from TALHA JOBAER-210118
